

Be a Naturalist

Finn and Willy love plants. They love to eat plants, grow plants, and learn about plants! Here is one of their favorite ways to learn about plants:

Find a piece of paper and something to write with. Go outside and find some plants. Any plant will do, even grass or weeds! Bend down so you are really close to the plant. On your piece of paper, draw or write down everything you notice about that plant. What shape is it? Where is it growing? What color is it? How does it move when the wind blows? What other details can you notice about it? See how specific you can be!
